EXPERT: Test Validation & Analysis Program

The TVAP software automates the multiple processes necessary to validate and analyze written tests. TVAP uses a content validity approach to validate KSA-based tests necessary for job success.

To help ensure that your testing processes are legally-defensible, TVAP includes the following calculations and analyses:

- Rater analysis and bias evaluation
- Item analysis (including Differential Item Functioning, or "DIF")
- Test-level analyses (descriptives, reliability, conditional SEMs)
- Cutoff score setting using the Modified Angoff Method
- Adverse impact analyses
- Top-down score banding using conditional SEMs
